

GDPR and Your IT

Protecting your company data is vital. It is one of the most valuable resources you have and the consequences of not keeping it safe could be disastrous for your business.

Under GDPR legislation, large fines can be imposed for failing to protect the data you control. Vantage IT can provide the assistance you need to ensure you know where your data is and that it is securely controlled.

We will assist with the following:

- Help you understand where data is stored so it can be tracked, protected and erased, if required
- Ensure your IT networks are protected from external intrusion and malicious software with firewalls and anti-malware software
- Implement data encryption for devices across a network
- Offer advice to users about protection of data and avoiding phishing attacks

For support with GDPR IT requirements for your business, please contact Vantage IT on [01296 668966](tel:01296668966) or email enquiries@vantageit.co.uk.

We have extensive experience configuring and implementing firewalls, installing and managing anti-malware software and providing managed encryption.

The security of the IT network should be a priority for any business.
